

Quick Start Guide

To start the library management project, implement following steps:

- Create 'library' database manually in MYSQL
- Import create script from '\DumpMySQL\Dump20161014-Structure'
- Import book data either from script file '\DumpMySQL\Dump20161014-Dstructure' or run data cleaning java files '\DataCleaning'

- Edit **application.properties** present either in '\ProjectJar' folder or in code (Depends on which of the following method you are using) and set database password and username. Make sure that jar and application file should be in same folder and open command prompt in the same folder.

- To run the library management Project, there are two ways:
 1. Run Project Jar
 - A. open command prompt and run given jar as java -jar library.jar
 - B. Hit <http://localhost:8080/library/#/>
 2. Java Project
 - A. Copy given code and import in java IDE as Existing maven Project
 - B. Compile given code using maven Command: mvn clean install
 - C. Run Application.java as java application
 - D. Hit <http://localhost:8080/library/#/>
